PROJECTS

WorkoutLogger

- As a team of three developed a full-stack workout logging application using Node.js and Express.js.
- Designed RESTful API endpoints for creating, updating, and retrieving workout sessions.
- Implemented MongoDB for data storage with Mongoose schemas to handle user and workout data.
- Integrated authentication features to enable personalized workout tracking.
- Worked with GitLab CI/CD pipeline and deployed application on Heroku

Trigon Vale

- As a team of three, designed and developed a 2.5D action-RPG in unity using C#
- Implemented a core game-play loop including exploration, enemy encounters and boss fights
- Integrated RPG systems such as story driven progression, and combat mechanics
- Applied object-oriented-design principles to structure game-play systems such as combat, progression and environment into modular reusable components

EXPERIENCE

Logistics worker

IKEA, Backebol

2019 - Ongoing

Gothenburg, SWEDEN

- Assisting in the daily operations of warehouse logistics, ensuring timely product availability
- Maintaining inventory accuracy by restocking shelves and organizing goods in storage areas
